

Bug ID: IMOD-01

Status: Open

Affected Version: Release_01

Summary: Incorrect translation for English text with appended letters

Steps to Reproduce:

1. Open Chrome browser.
2. Navigate to <https://translate.google.com> link
3. Select "English" as the source language.
4. Select "Sinhala" as the target language.
5. Enter the word "who" into the text area.
6. Verify the translation result.
7. Append each of the following letters individually to the end of the text: 'R', 'l', 'e', 'x'.
8. Observe the translation result for each appended letter.

Expected Result:

- For the initial text "who", the translation should be “කවුද”.
- After appending letters ('R', 'l', 'e', 'x'), the translation should display the appended English text as is (e.g., "whoR", "whoL", "whoE", "whoX") without translation.

Actual Result:

- Regardless of the appended letter, the translation remains "කවුද", which is the translation for "who" without considering the appended letter.

Priority: High

Severity: Major

Environment:

- **Browser:** Chrome , Safari
- **Operating System:** macOS
